Personal Entrepreneur Events Journey Learning Plan (PELP)

Kaiyan Ren

1. Personal Mission

With a background in Statistics from Nanjing University and current training in AI & Entrepreneurship at HKUST, my mission is to explore how artificial intelligence and data-driven technologies can create practical impact in advanced manufacturing, smart transportation, and financial technology.

Rather than rushing into entrepreneurship, I aim to first gain industry exposure and strengthen my execution capability. Over the next 12 months, I hope to clarify whether I should deepen my expertise within a technology-driven company or gradually prepare for future entrepreneurial exploration.

2. 3-Month Learning Goals (Feb–May 2026)

In the coming three months, I aim to:

- Understand how AI solutions are commercialized in real industries.
- Improve execution discipline through structured event participation.
- Strengthen coding and system-level implementation ability.
- Observe startup pitching and investor evaluation criteria.
- Build meaningful connections within Hong Kong's AI ecosystem.

I will actively engage with founders, competitions, and industry events, and document structured reflections after each activity.

3. 12-Month Development Vision

Within the next 12 months, I aim to:

- Gain internship or full-time exposure in a technology-oriented company.
- Strengthen engineering execution and deployment capability.
- Identify one feasible AI application in manufacturing, smart mobility, or fintech.

- Develop a small prototype to test technical feasibility and potential impact.
- Continue evaluating entrepreneurship as a long-term pathway.

My goal is to gradually transition from being idea-oriented to execution-oriented.

4. Event Plan

#	Description	Objective / Achievement	Key Dates
1	Attend AI/Tech Seminar (HKUST / Science Park / Cyberport)	Understand commercialization cases and connect with 2–3 participants	March 2026
2	Interview an entrepreneur (AI-related preferred)	Learn execution challenges and decision-making under uncertainty	March 2026
3	Participate in AI/Data Hackathon or Competition	Apply coding skills in team setting and improve execution discipline	April 2026
4	Attend Demo Day or Pitch Event	Observe investor expectations and prepare a mock 3-minute pitch	April 2026
5	Personal Development Reflection	Structured reflection on execution growth and career clarity	May 2026

Estimated time per event: Participation (3–6 hours) + Reflection (1–2 hours) + Dialogue Session (1 hour)

Curriculum Vitae

Kaiyan Ren

Email: krenab@connect.ust.hk

Phone: +852-56888924

Hong Kong SAR

Education

Hong Kong University of Science and Technology

MSc in AI & Entrepreneurship

Relevant Coursework: Machine Learning, Machine Learning Systems, Computer Vision, Natural Language Processing, AI Ethics

Nanjing University

Bachelor of Science in Statistics

Relevant Coursework: Statistical Inference, Data Mining, Optimization Methods, Probability Theory

Technical Skills

Programming: Python, R, SQL, C++, etc.

Machine Learning: Ensemble Learning, Deep Learning, Reinforcement Learning

Tools: PyTorch, TensorFlow, etc.

Database: MySQL, etc.

Selected Projects

Cough Detection System with On-Device Deployment

(Machine Learning Systems Project)

- Developed an audio classification model to detect cough sounds from environmental audio.
- Implemented model compression techniques for efficient edge-device deployment.
- Applied federated learning framework to enhance privacy protection.
- Optimized trade-off between model accuracy and computational efficiency.

Video Style Transfer System

(Computer Vision Project)

- Built a deep learning model for real-time video style transfer.
- Implemented convolutional neural network architecture for frame-wise transformation.
- Improved temporal consistency across video frames.

Train Delay Prediction – Real-Time Railway Data

- Built predictive models (KNN, SVM, Decision Tree) on real-time datasets.
- Compared algorithm performance under different scenarios.

Mushroom Toxicity Classification (UCI Dataset)

- Applied Bayesian discriminant analysis and ensemble methods.
- Compared statistical approaches with machine learning models.

Awards

Third Prize, Chinese National College Students Mathematical Competition (Mathematical A Group)
